

In the Specification:

Please replace the paragraph beginning on page 6, line 11, with the following rewritten paragraph:

The express kits 10 are operated by a pump 30. The pump 30 can be any suitable type of pump, such as the diaphragm pump shown. The pump 30 includes a housing 32, a diaphragm 34 in the housing and a motor 36 connecting the output of the motor to the diaphragm so that the diaphragm moves back and forth as the motor rotates. The pump produces bi-directional pressure (as in Fig. 6B) at a port 38 as the diaphragm reciprocates. Pressure can be vented through valves 40 as needed. The pump could also be a piston pump or other suitable pump, and it could be ~~hard~~hand operated, if desired.
